Personal Projects

Hospital Database Management System   Github   Dec. 2022

- Users from the hospital database can perform CRUD operations
- The pharmacist can produce a sales report. A pharmacist can read a prescription that a doctor has added for a specific patient.
- I have used Java and MySQL database systems. This system does not contain any attractive UI design

Employee Management API   Github   May 2023

- This project provides a REST API with CRUD capabilities for Employees that is built on Spring Boot and MySQL.
- Spring Security adds Basic Authentication. Additionally, test cases were created.

User Location API   Github   Apr. 2023

- This project involves creating a Spring Boot REST API with CRUD functionality for two user roles, creating and updating a database table using HSQL and JDBC Template, and returning a list of the N nearest users from a given location.
